SEPTEMBER 30, 1915

SAN FRANCISCO
CALIFORNIA

Main Entrance and Chapel, St. Luke's Hospital, San Francisco

TO THE READER

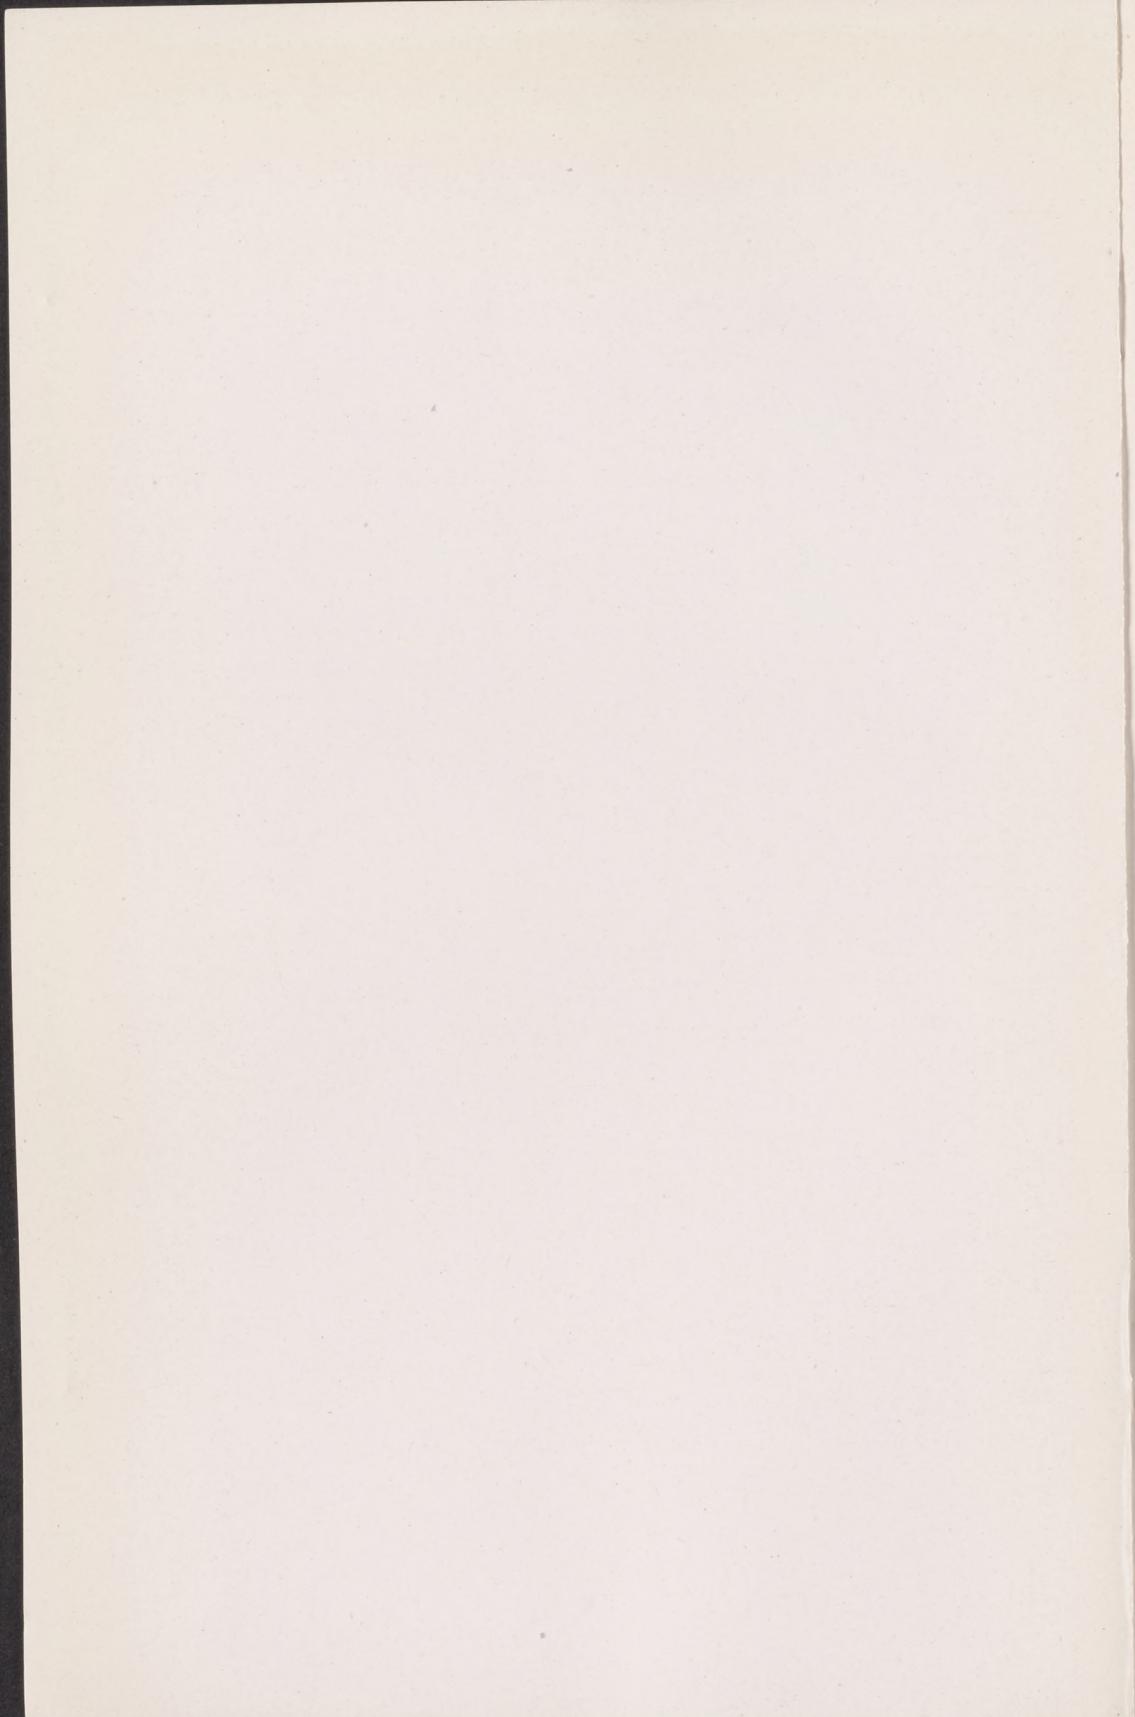

We want you to become familiar with the work of St. Luke's Hospital and especially with its aims.

St. Luke's Hospital is a corporation conducted with the object in view of furnishing free hospital and free medical care to deserving people, and is not a stock company. All money that may be made from the running of the hospital is returned in the form of care of free patients.

We invite you to become interested and, if interested, to visit the hospital, and we will be glad to welcome your advice or counsel.

We solicit subscriptions for any department of our work. We can arrange for you to assist directly in one of the special departments of the hospital if you will indicate your willingness to be identified with some of our charities. The names of the members of the Corporation and the Board of Directors are sufficient warrant for the wise use of all funds that may be contributed.

If your circumstances are such that you are not able to contribute to the charity work of the hospital, you can at least do us the favor of reading herein about the work we are doing.

South Exposure of the Hospital

Tennis Court, Nurses Home and Mills Building

ANNOUNCEMENT

St. Luke's is a general hospital, organized in 1871 under the auspices of the Episcopal Church; but no distinction is made between the various nationalities or creeds, its doors being open to all. Patients are allowed every facility for receiving the consolation of their own churches.

The hospital is situated on Valencia Street, near the junction of Mission street, surrounded by well-kept grounds. It is free from the cold winds, fog and noise of other portions of the city, while at the same time easily accessible by the Valencia Street cars, which pass the door; also by the Mission Street line and the San Francisco and San Mateo electric cars, which pass within a block.

The corps of Attending Physicians and Surgeons is composed of men of known reputation and ability.

The members of the House Staff are also thoroughly efficient and attentive to their duties.

The Directors desire especially to bring St. Luke's Hospital to the notice of patients from a distance who may desire special treatment from surgeons or physicians in the city. Such persons can be accommodated as in a hotel, yet have the care and comfort of a home, and have their own physicians and nurses if desired.

St. Luke's Hospital cares for three classes of patients: In the first class are those who are able to pay the hospital charge for board, nursing and medicines, but are unable to pay for the services of a physician or surgeon; in such cases medical attendance is furnished by the hospital. The second class consists of private patients who select their own physicians or surgeons (who may be members of the attending staff or not), and who come to the hospital for the accommodations it affords. The third class is composed of those who are unable to pay anything to the hospital, and are admitted to the free beds.

All kinds of acute, curable and non-contagious diseases are treated in the hospital. Chronic and incurable complaints may be received and retained at discretion, but will not be

permanently provided for. No patients are admitted suffering from any ailment that would occasion discomfort to other patients.

All reputable physicians and surgeons are invited to send their patients to the hospital, where they may attend them without fear of interference, but the hospital reserves the right to refuse cases from any physician or surgeon, for any reason that the hospital may deem sufficient.

Patients sent into the hospital by physicians not on the hospital staff cannot be treated by any member of the hospital staff except by special request from the doctor sending the patient into the hospital. The Board of Directors desire to extend every hospitality to the physicians of the community at large, and to assure them every attention and courtesy from the resident executive and medical staff. Their orders will receive the same attention as those of the regularly appointed visiting staff. Many conveniences which add greatly to the efficacy of the hospital work are being installed from time to time, and a most satisfactory service is guaranteed to any physician or surgeon treating his patients here.

Complete records are kept of every patient from admission to discharge, to enable those physicians and surgeons who so desire to obtain ready reference to their cases.

The building is new and modern and the different departments have been well equipped with the latest and best apparatus for scientific treatment and for the comfort of the patients.

RATES

Ward Beds	\$17.50 per week
Rooms	\$25.00 per week and up
Private Baths with Rooms	\$10.00 per week extra
Suites with Bath	\$70.00 per week and up.
Maternity Ward	\$50.00 for Two Weeks.
Maternity Rooms	\$60.00 for Two Weeks and up
Detention Rooms	\$30.00 and \$35.00 per week

CHARGES

The above charges include board, lodging and the attention of a nurse on general duty and must be paid weekly in advance. Over-payments will be refunded, but when the service is for less than a week the daily rate will be charged.

EXTRA CHARGES

Nurses—For graduate nurses the charge must be arranged between the patient and nurse directly. A graduate nurse charges \$25.00 per week and up. The Hospital charges \$1.00 per day for the board of graduate nurses.

Medicines and Dressings—Proprietary and compounded medicines, serums and excessively expensive medicines will be charged for. Excessive quantities of dressings or special dressings other than those ordinarily used in the Hospital will also be charged for.

X-Ray Work—Charges for X-Ray work vary from \$5.00 to \$30.00. The plates are the property of the Hospital. Duplicates or prints may be obtained.

Operating Room—The charge for the use of the operating room is from \$5.00 up, depending on the time consumed and the nature of the operation. An extra charge is made for gas anaesthesia and for special anaesthetists.

Hydrotherapeutic Treatments—Charges for treatments in the Hydrotherapeutic Department vary from \$1.00 to \$5.00 per treatment.

Pathological Examinations—Ordinary pathological examinations of blood, urine, sputum, feces, etc., will not be charged for. The following class of examinations, however, will be charged for: Histological examinations of tissues, Wasserman reaction, examinations requiring the inoculation of Guinea pigs, autogenous vaccines, etc.

Professional Fees—The professional fee must be arranged between the patient and the physician or surgeon and is not included in the Hospital charge.

VISITORS

Visiting Hours—Visitors are admitted to the wards between 2:00 and 5:00 p. m. and 7:00 and 9:00 p. m.

Relatives and friends will not be permitted to remain in the Hospital over night except by special permission from the Superintendent, when they will be assigned to a room and charged a special rate.

NOTES

Laundry—The personal laundry of the patients will not be done by the Hospital laundry.

Contagious Diseases—No case of a contagious nature will, under any circumstances, be admitted to the Hospital.

Gifts—Under the rules of the Hospital no member of the House Staff, Nurse or Employee, is allowed to receive any compensation or gift from any patient, unless authorized to do so by the Executive Committee.

Valuables—The Hospital will not be responsible for money or valuables, unless deposited in the office.

ENDOWMENTS

St. Luke's has been most magnificently endowed with buildings and grounds but most sadly needs endowments for the free treatment of patients in order to accomplish more of the charity work for which the Hospital was founded and which it is called upon to do in ever increasing amounts. The sum of fifteen thousand dollars will endow a bed in the wards in perpetuity. Thirty thousand dollars endows a private room bed in perpetuity.

A careful estimate has been made, and the income from these endowments provide for the beds being occupied every day of the year.

Endowments of any amount will be gladly received and service will be rendered yearly to the extent of the earning capacity of the amount donated and in strict conformity with the wishes of the donors.

Each one thousand dollars at 5% interest will provide \$50.00 worth of free care each year.

Patients occupying any endowed or partly endowed beds, do so with the understanding that they are to be treated by the members of the Visiting Staff of the Hospital.

REPORT OF THE PRESIDENT

October 20, 1915.

*To the Members of the Corporation
of St. Luke's Hospital.*

GENTLEMAN: At the end of this fiscal year, the second in the occupation of our new buildings, I take pleasure in submitting the various annual reports relating to the activities and conduct of affairs of the Hospital. I think we may safely say that we have made progress during the year. Since the last annual meeting the property then owned by Mr. Bancroft has been bought by the donors of our new buildings and presented to the Hospital and we now own the entire block giving us ample room for growth. The brick building on this property has been painted to correspond to the color of our main buildings, the street line has been neatly fenced and the ground itself laid out in garden and walks. The appearance of our entire Valencia Street frontage has been greatly improved since acquiring this property. The building itself is not yet utilized but we hope to find some useful purpose for it later on. The Mills Building and the old Administration building have been renovated and painted to correspond with our other structures and a new, permanent tennis court has been built to take the place of the clay court first installed. Awnings have been made for the porches of the Hospital greatly adding to the comfort of the patients when out of doors. I regret to say that our wells have not been as successful as we had hoped and we are still compelled to be under heavy expense for outside water supply. The Woman's Board has been active during the year and its influence has been felt and appreciated on all sides. During the year past two endowment funds for new free beds have been created, one, to be known as Trinity Church Free Bed, amount paid in being sixteen hundred dollars; the other known as the St. Luke's Nurses' Alumnæ Association Free Bed, amount paid in being one thousand dollars. We hope to see these funds grow rapidly.

I desire to call your attention to the following statistics all showing gratifying progress. Number of days of free work during the past year, 2808, as against 2445 in 1914, 1931 in 1913, 1802 in 1912, and 860 in 1911. Total number of patients treated during the past year, 3117, as against 2423 in 1914, 1761 in 1913, 1666 in 1912, and 1570 in 1911. Number of days of hospital care during the past year 33,510, as against 27,588 in 1914, 22,429 in 1913, 22,370 in 1912, and 19,853 in 1911. The number of patients treated has doubled and the amount of free work more than trebled in five years.

Harmonious relations have existed in and between all departments of the Hospital.

Your co-operation is asked in bringing the Hospital to the attention of our citizens and visitors with the view of obtaining means to broaden our work and attain our future vision of free service.

Respectfully submitted,

LOUIS F. MONTEAGLE,
President.

REPORT OF THE EXECUTIVE COMMITTEE

*To the President of the Board of Directors of
St. Luke's Hospital, San Francisco, Cal.*

GENTLEMEN: Since the last report, through the generosity of the donors, the Bancroft lot, with the brick building thereon, has been acquired, and the Hospital now owns the entire block bounded by Valencia, Duncan, San Jose Avenue and Army Streets. The brick building, together with the Mills and the old Administration buildings, have been painted, the grounds laid out, and the whole property presents a most attractive appearance, and is perhaps the most notable memorial to be found in the city.

The number of patients shows a slow but steady increase over the average of previous years and the many letters received from patients or members of their families have been very flattering and gratifying, testifying to the character of the service rendered, and form the best possible recognition of the work done by the Visiting Staff, the House Staff and the Nurses.

The continuation of the war has added difficulties to the Hospital work; certain instruments can not be purchased at any price, there are none in the market; certain drugs have gone up in cost several hundred per cent, and some can not be had, no matter how urgent the need; these facts together with the increased cost of other articles have added to the problems of the Superintendent and those associated with him in their efforts to provide for the surgeons and physicians on the one hand and the patients on the other, everything that a first class hospital ought to give.

The monthly meetings of the Board of Directors are held so regularly that stated meetings of this Committee are not held but any questions arising between meetings are discussed by the chairman with the other members of the Committee.

Respectfully submitted,

JOHN A. EMERY,
Chairman,

October 1, 1915.

Interest:	
Received on bank balances.....	9,324.28
Less interest paid on loans	344.32
	\$548,960.49

The value of the land on which the hospital buildings stand, has not yet been appraised; there is a mortgage of \$32,000.00 with the Hibernia Bank on this real estate, which is, of course, ample security for the loan.

AUDITOR'S CERTIFICATE

October 26, 1915.

I HEREBY CERTIFY that I have examined the accounts of the Venerable J. A. Emery, Treasurer of St. Luke's Hospital, for the fiscal year ending September 30th, 1915, and have found the same correct and in good order.

BUILDING FUND: The disbursements of this Fund are supported by proper vouchers and the accounts are now closed.

SINKING FUND: This embraces all the Endowments and Investments of St. Luke's Hospital, as shown by the balance sheet on page The report of 1909 stated that the Sinking Fund was commenced with \$17,000 received from the Red Cross Funds in 1906, to which was added \$25,000 received from the New York Chamber of Commerce Fund towards the rehabilitation of San Francisco.

This fund, principal and interest, has been used to make good the annual deficits in the Hospital working fund account, as shown by the transfer to current account in the subsequent annual reports. With the completion of the new buildings, it is hoped the Hospital will be placed on a basis of paying its own expenses, hence the advances this year are treated as a loan.

The bonds have been verified by actual count, and found on hand with coupons not yet due attached thereto. The savings bank and current bank accounts have been verified and found correct.

CURRENT ACCOUNT: No audit has been made of the Expenditure Accounts at the Hospital, but the receipts and disbursements of the account current between the Treasurer and Hospital Superintendent have been verified with the bank accounts.

The difference between the total expenditures at the Hospital and the total disbursements of the Treasurer arises from the fact that September expenditures are covered by October disbursements, hence the liability for September bills does not appear on the Treasurer's account. In the next Annual Report, when the value of the real estate has been appraised, all the assets and liabilities will be brought on to the books and a comprehensive report submitted.

With this explanation, I take pleasure in certifying to the correctness of the accounts presented.

(Signed) FREDERIC M. LEE,
Certified Public Accountant.

ANNUAL REPORT
of
THE WOMEN'S BOARD OF ST. LUKE'S HOSPITAL

The Women's Board of St. Luke's Hospital has completed its second year's work.

One member of the Visiting Committee has visited the Hospital each week, inspecting every part of the Hospital, and has found nothing to complain of, much to praise, with now and then a suggestion offered towards the betterment of some special thing.

Flowers have been placed in the Chapel one day each week and the Christmas trees and garlands given by the Board, and Mrs. MacMonagle decorated the Chapel for Easter.

Christmas and Easter cards were given for each tray and on St. Valentine's Day a valentine was given to each child in the Hospital.

The members of the Board have made this year eleven dozen slips and two dozen flannel skirts for the maternity ward.

The Library Committee has continued its work of distributing magazines and papers each week, and through the kindness of many the number of books has been greatly increased, and all are in constant use by the patients.

A Social Service Committee has been appointed to follow up deserving cases where the patients on leaving the Hospital need a little time for convalescence before they are able to again take up their work.

Respectfully submitted,

EMMA C. BALDWIN,
Secretary.

CHAPEL SERVICES

During the first half of the year the services were regularly conducted by the Rev. F. H. Church, who also visited the Hospital, making calls in the wards and rooms. For some months past these services have been taken by the Rev. Messrs. J. H. Oehlhoff and Ernest Bartlan, who have been making regular visits to the Hospital every week and holding themselves in readiness to respond to any call. The Rev. Henry Howitt comes over on the third Sunday of every month for the evening service, and for the celebration of the Holy Communion.

REPORT OF THE SUPERINTENDENT

To the Board of Directors

St. Luke's Hospital.

GENTLEMEN: As Superintendent I again have the honor of submitting to you the report of the Hospital for the fiscal year just closed.

The appended reports give a detailed statement of our various activities.

There has been a steady and gradual increase throughout the year in the number of patients treated. During the last two months the increase has been very marked so that the Hospital is now treating more patients than it ever has done before.

The increased business has resulted not only from a slight increased patronage by the staff but more largely from outside doctors not officially connected with the Hospital.

FINANCIAL STATEMENTS

Our collections for the year have been \$137,862.32, an increase of 26 per cent over last year while our expenditures have been \$144,254.88, an increase of 16 per cent over last year. There would therefore appear to be a deficit of \$6,392.56, which is 57 per cent less than the deficit of last year. We find, however, that the amount of free work done cost us \$10,738.00 and is 6 per cent more than last year and more than counterbalances the deficit. We have, therefore, this year cleared \$4,345.44, which, however, only shows on our books as free work.

The total of money due from pay patients but uncollected at the end of the year amounts to \$5,471.46, a decrease of 8 per cent over last year and only 3 per cent of the total to be collected, while last year it was 6 per cent.

There has also been a decrease in the cost per patient per day. Last year it was \$4.50, this year \$4.30, a reduction of 4.8 per cent.

This cost, however, is still high and is partly if not wholly explained by our excessive overhead expenses.

In the report of last year the optimistic statement was made that an average of 90 patients would bring in enough revenue to support the Hospital. There were, however, several facts which although not overlooked, still were not given due consideration in arriving at the above opinion.

- 1st. The increased demands of the physicians and surgeons for apparatus and supplies with no intimation on their part to increase the hospital charges to the patients.
- 2nd. The increased cost of certain supplies especially drugs.
- 3rd. The overhead expense during the year has been materially increased without at the same time increasing the possibilities of increasing our collections.

EXPERT INVESTIGATIONS

Through the courtesy of Mr. Archibald Kains we were put in touch with Mr. W. H. Fieldhouse, an accountant and business expert, who spent some time in studying the institution and from whom we obtained many suggestions which have been of value in the management of the affairs of the Hospital.

It is hoped in the near future to get in touch with experts along other lines and have them study the Hospital from their various points of view. We feel in this way many valuable suggestions for improving the workings of the institution will be received.

We have submitted some of our problems to Dr. Ray L. Wilbur, Dean of the Medical Department of Stanford University and feel that his comments and criticisms will, when received, be of great benefit.

RESIDENT STAFF

Miss D. Juell has been added to the Laboratory Staff as assistant.

Dr. Thos. A. McIntyre, interne, resigned November 1, 1914.

Dr. E. H. Nast, interne, was suspended for six months on December 2, 1914, reported for duty July 10, 1915 and resigned July 14, 1915.

Dr. J. W. Ballard, interne, resigned November 4, 1914.

Dr. Byron Y. Miller, a graduate of the Medical Department,

University of Maryland, 1914, came on duty as interne November 10, 1914. Resigned January 3, 1915.

Dr. J. M. Smithwick, a graduate of Jefferson Medical College, 1911, came on duty as interne January 20, 1915, and remained until July 30, 1915.

Dr. C. F. Larson, a graduate of the Medical Department, University of Oregon, 1914, came on duty as interne December 15, 1915.

Dr. Clyde T. Wetmore, a graduate of the Medical Department, Stanford University, 1915, came on duty January 1, 1915.

Dr. J. Marion Read, a graduate of the Medical Department of Stanford University, 1915, came on duty July 1, 1915.

INTERNES.

The problem of obtaining internes that confronted us a few years ago is apparently being solved as we are now receiving applications from many for the positions as they become vacant and with the different medical colleges throughout the country establishing one interne year as a requisite for graduation, the supply of internes will increase.

WOMEN'S BOARD

The report of the Women's Board shows the good work that has been done by them under the direction of Mrs. Monteagle, their President, and clearly demonstrates the advantage that has accrued to the Hospital by having such an untiring and progressive organization working in harmony with the management for the advancement of the interests of the Hospital.

This Board has arranged many social functions and musical recitals which have been very comforting to the patients.

REPORTS

As in the last report we are publishing the work of the different clinics, departments, boards, clubs, etc., that are connected with the Hospital and there is no need to do more than to refer to them here.

The reports from many of the different internal depart-

ments of the hospital have up to this time been principally composed of dry figures and statistics, but this year the start has been made to preface some of these with observations or conclusions which have been made by the department heads which we trust will be of interest to the readers of this report and which we hope will increase in number in the next report.

The Postgraduate Course is proving to be a distinct assistance to the management of the hospital by training nurses for executive positions.

FOLLOW-UP SYSTEM

The statistical report of the Follow-up System will be found among the appended reports.

A careful study of it will be instructive to anyone who is interested.

Follow-up systems that have been introduced in other hospitals have met with opposition and with ridicule and with sarcasm and we can very safely say that the follow-up system of this hospital is no exception.

We expected trouble for the reason that this system is new but we believe that it is one of the things in the handling of patients in the future that will be considered as a routine measure. We feel, therefore, that those who make use of this department show that they are progressive and not merely floating with the medical currents of today.

The originator of this system, Codman of Boston, has had "trouble," so that with all the lack of support that has been manifested here we still feel that in the end we will be able to make this absolutely a routine measure that a doctor sending patients to the hospital will send them partly because the hospital will attempt to do part of the doctors' work and keep track of these patients for them.

NEEDS

The reports of the President and Chairman of the Executive Committee call attention to the big needs of the hospital especially those requiring endowments. It is therefore unnecessary to do so in this report. There are, however, several minor needs to which we wish to call your attention.

Many of these which were mentioned in last year's report have been provided for through one source or another, but the following things are still lacking.

A McKenzie Modified Polygraph for studying more accurately the action of the heart than can be done by the senses alone. Cost about \$100.00.

Electro cardiograph for studying the action of the heart by electrical methods. Cost about \$1500.00.

A high frequency electrical machine for the application of electricity in certain conditions and for fulguration. Cost about \$300.00.

Elapsed time recorders for recording the length of time that elapses between the time that a patient calls for a nurse and the time the nurse answers the call. Cost about \$1000.00.

Besides the above needs, all of which can be relieved by money, there is one thing which we believe is far more important and which demands careful study and that is the fact that there is demanded a closer amalgamation of the different organized bodies associated with the Hospital with the object of having them all strive toward a common goal. At present there seems to be a diversity of aims among these Boards which must be all brought into a common aim if the Hospital is really to progress and prosper.

IMPROVEMENTS

Through the continued generosity of the same friends of the Hospital who have done so much for us during the past few years, the following repairs and improvements have been made possible.

The old Administration building has had all its windows screened and has been painted.

The Mills building has been reshingled and painted. New curtains and shades have been put on all of the windows of the lower floor.

A small brick addition with brine pipes for keeping it cool has been erected near the kitchen and is used for storing garbage.

A new tennis court has been laid of a specially prepared

asphaltum and has been enclosed with a substantial wire fence. It is very much appreciated by all who use it.

Extensive painting of different parts of the hospital has been done. This has been done in parts that it was not originally considered wise to paint and was mostly in the basement.

A marble tablet has been installed in the hall leading to the Chapel on which is inscribed statements showing the gifts that have been received by the Hospital to further the free work.

The most important gift of the year was that of the former Bancroft property so that now the Hospital owns the entire block of land and will be unhampered in future building and extension.

Awnings have been installed over the loggia in the south or patients' court, so that patients are now protected from the sun. This has been very much appreciated by all.

The fourth well which was being sunk at the time of our last annual report proved to be a failure. The three producing wells have not kept up to what they originally produced so that we still have a large water bill. The increased amount of grounds under cultivation has helped materially in this increased consumption of water. This expense is a part of our overhead expense which it hardly seems correct to charge to the management and should not be paid out of the running expenses of the Hospital but out of an overhead endowment fund.

SUPPLIES

In the report of last year attention was called to the fact that on account of the war it was impossible to predict what influence it would have on the running expenses of the Hospital. Today it is not only a matter of whether the Hospital can pay for supplies but rather whether it can or cannot get certain articles which are used extensively.

Take as examples in the drug line the following: Carbolic acid formerly \$.12 per lb. is now \$1.65 per lb., and the available supply very limited. Sodium Salicylate, formerly \$.60 per lb. is now \$3.00 per lb. and the available supply limited. Antipyrine, formerly \$1.50 per lb. is now \$12.50 per lb. and

the supply limited. Many surgical instruments cannot be obtained at present and all prices have increased. Popular sizes and styles of surgical needles are hard to get, sometimes impossible; satisfactory catgut is scarce and held at a high price; hospital enamelwares are not being received so that local stocks are fast being depleted.

Linen goods are decidedly higher in price and not always obtainable.

On the other hand we find practically no reductions. At one time, but for a very short time, cotton goods were lower than they had been but are now about what they were two years ago.

What may occur along these lines during the next year or even the next month cannot even be guessed at today, so that prophesies as to the cost of maintaining the Hospital during the next year cannot be made.

ACKNOWLEDGMENTS

We wish to thank the different members of the clergy who have ministered to the patients at different times during the year, also the many friends of the Hospital who have donated flowers, books, magazines, all of which have been very much appreciated by the patients.

Respectfully submitted,

W.M. R. DORR,
Superintendent.

GENERAL STATISTICS

For the year ending September 30th.

REPORT OF RESIDENT PHYSICIAN

*To the President and Board of Directors of
St. Luke's Hospital.*

GENTLEMEN: I have the honor of submitting herewith to you a report of the medical and surgical work of the Hospital for the past year.

We have decided to publish in this report notes, which we hope may be of some value to other medical men, of some observations that have been made in our various departments during the year.

NOTES ON OBSERVATIONS OF CASES FOR THE YEAR

It has been noticed that individuals past middle life who show a high Hemoglobin, 110 to 120, are very poor surgical risks and more especially for operations on the prostate. The patients either die or are critically ill for several days. The high Hemoglobin is only one of the indications of the peripheral stasis and it is likely that the myocardium is weak in such individuals.

Second, we are depending upon X-Ray examinations of chests in order to diagnosticate central pneumonia. In a few cases this procedure has been of great assistance to us and we would recommend it in children to differentiate right sided pneumonia from appendicitis.

Third, this year in abdominal pus cases we have paid special attention to prevent soiling our incisions with infectious material with the result that we have obtained primary union in nearly all of these cases save for the part of the incisions where drainage was placed. In these cases convalescence has been shortened and no hernias have occurred.

Fourth, in our peritonitis cases, besides employing the Fowler position and the Murphy drip, we routinely wash out the stomach every four to six hours and administer 1000 cc. of normal salt solution hypodermically every six hours. This method seems to have been very beneficial in the cases we have had the opportunity of studying. This plan of therapy is de-

pendent upon the work published in A. M. A., 1914, by Murphy and Brooks in Washington, D. C., Section on Surgery General and Abdominal.

Fifth, patients with a Hemoglobin less than 40, who have presented themselves for hysterectomy, have been transfused from 1 to 2 days prior to their operation with the most satisfactory results.

Sixth, there is a growing tendency in this Hospital to have cases in the hospital whenever possible, for several days prior to any serious operation in order to estimate as nearly as possible the surgical risk.

Very respectfully yours,

FAYETTE WATT BIRCH, M. D.,

Resident Physician and Surgeon.

San Francisco, Cal., October 1, 1915.

LIST OF OPERATIONS

HEAD		Neck	
Skull			
Craniotomy	13	Adenectomy	19
Excision bullet from orbit	1	Excision lipoma	2
Excision cyst scalp	3	Excision tumor parotid	1
Mastoid	12	Excision specimen from neck	1
Myringotomy	1	Incising abscess of neck	11
Suturing scalp	4	Incising carbuncle	2
Face		Removal cyst	1
Curetting antrum	6	Thyroidectomy	6
Double tenotomy eye	1	Tenotomy	1
Excision pterygium	2		
Excision tumor	6	THORAX	
Excision anterior chamber of eye	12	Amputation	12
Excision sebaceous cyst	3	Incision of abscess	6
Excision lupus nose	1	Excision of tumor	4
Extraction cataract	12	Breast	
Enucleation eye	5	Aspirating for pleuretic fluid	1
Examination of antrum	3	Excision of lipoma	1
Injection into facial nerve	3	Pneumothorax for tuberculosis	2
Iridectomy	7	Thoracotomies	14
Plastic of ear	1	Back and Spine	
Plastic of eye-lid	3	Bone grafting, tibia to spine	2
Plastic of lip	2	Coccygectomy	2
Suturing wound of face	1	Excision of wen	2
Turbinatectomy	12	Excision abscess of back	1
Trepanning ear	1	Laminectomy	2
Jaw		Plaster jackets	9
Curetting necrosed bone	1	Removal foreign body	1
Cauterizing cavity	1	Suturing spina bifida	2
Excision of sequestrum	1	ABDOMEN	
Excision of carcinoma	6	Abdominal Wall and Cavity	
Excision condyle for infection	1	Aspiration abdominal cavity	2
Mouth and Pharynx		Closing abdominal wound	6
Adenoideectomy	425	Closing abdominal sinus	2
Curetting tumor of mouth	2	Excision abdominal cyst	1
Excision tumor of mouth	1	Excision lipoma	1
Excision tip of uvula	1	Incision abdominal abscess	4
Excision cyst from uvula	1	Opening abdominal wound	1
Examination of throat	1	Separating abdominal adhesions	12
Extraction of teeth	7	Suturing umbilical cord for hemorrhage	1
Incision abscess of mouth	1	Stomach	
Incision tonsillar abscess	2	Exploratory laparotomy	1
Staphylorrhaphy	4	Gastro-enterostomies	20
Suturing tongue	1	Gastrorrhaphies	4
Suturing tonsils for hemorrhage	3	Gastrogastrostomies	3
Tonsilectomies	413		

Gastroplaxy	1	Opening cyst	1		
Pylorotomy	1	Opening pelvic abscess.....	13		
Small Intestines					
Enterostomy	7	Diaphragmatic	1		
Enterorrhaphy	1	Femoral	7		
Excision duodenal ulcer.....	2	Inguinal	69		
Enteroenterostomy	1	Inguinal strangulated	1

PATHOLOGIST'S REPORT

*To the Board of Directors of
St. Luke's Hospital.*

GENTLEMEN: The numerical list of the laboratory reports for the year ending October 1, 1915, shows an increase over the previous year of about 23 per cent. For this reason one more technical assistant has been added.

Notwithstanding the increased work the records are better kept and are therefore more available for references and of more permanent value.

Effort is made to have a written record of all pathological material from the operating room. By this means three cases of malignancy have been detected earlier than would otherwise have been the case. Sections of these cases have been photographed and added to the written reports. A reproduction of these is found appended to this report.

From the viewpoint of accuracy it is evident that photographic methods are more generally needed. This has been attempted to a limited extent and the necessary apparatus has been added to the laboratory equipment. Microphotography is necessarily time consuming so that it is not yet available as a routine procedure.

All gross and microscopical material is preserved in a systematic manner and gone over each week at the Friday clinical meetings. The mere fact of weekly discussion and criticism by the members of the Club has added much to the care in which material is recorded.

The laboratory invites work to the utmost limit and there has been a friendly interest and co-operation from all concerned.

(Signed) E. V. KNAPP,
Pathologist.

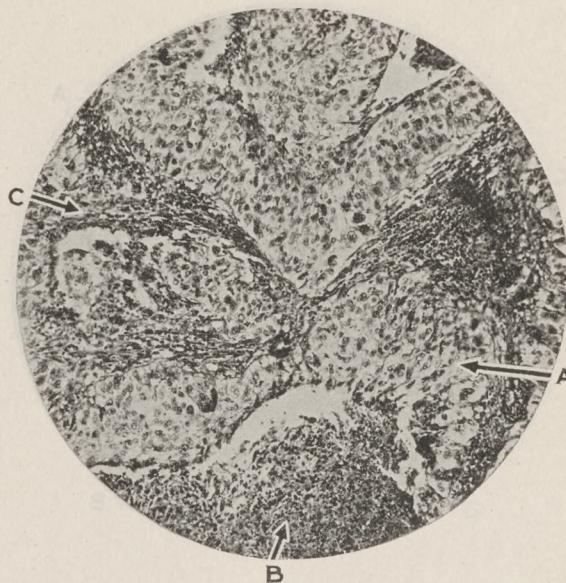

Fig. 1.

a.—Atypical epithelium.

b.—Collection of pus cells.

c.—Connective tissue extensively infiltrated with leucocytes.

Miss S. No. 533. July 31, 1914. Dr. Birtch.

Tissue from cervix.

Section shows a very slight amount of very cellular connective tissue but for the most part made up of strands and masses of large atypical epithelial cells. In places are quite large collections of leucocytes and necrotic tissue.

Diagnosis: Carcinoma of uterus.

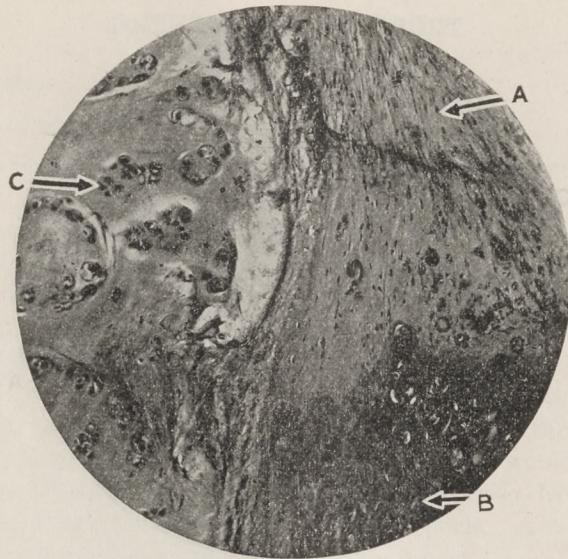

Fig. 2.

a.—Connective tissue.

b.—Bone cells.

c.—Hyaline matrix and cartilage cells.

Mr. A. No. 635A. September 10, 1914. Dr. Simpson.

Tissue from tumor in groin.

Tissue has the appearance of soft cartilage in which are bone-like spicules.

Sections show for the most part a clear hyaline matrix in which are irregular groups of large atypical cartilage cells. Some areas show a quite dense fibrous tissue structure in which are frequent calcareous deposits, more or less circumscribed by cartilage and bone-like cells.

Diagnosis: Chondro-sarcoma.

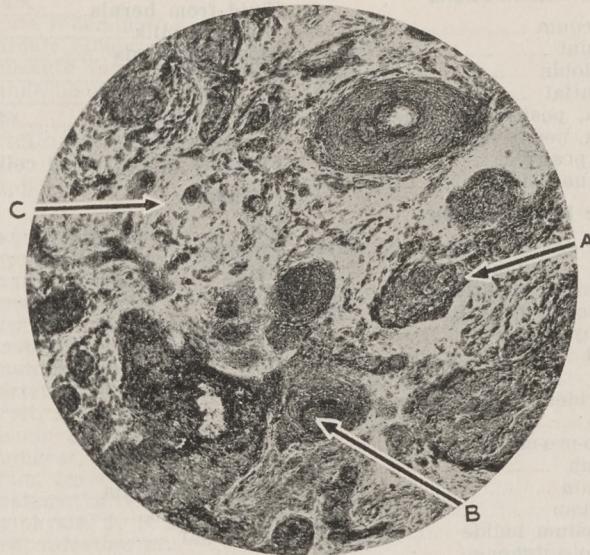

Fig. 3.

- a.—Atypical epithelial masses.
- b.—Epithelial pearls.
- c.—Light areas of connective tissue stroma.

Mr. R. No. 21. January 17, 1914. Dr. Leavitt.

Tissue from small nodule on eyelid.

Sections show a loose, quite vascular, connective tissue stroma in which are irregular masses of atypical epithelium, in places arranged in horny pearls.

Diagnosis: Epithelioma.

REPORT OF THE X-RAY DEPARTMENT

*To the Board of Directors
St. Luke's Hospital.*

GENTLEMEN: In connection with the usual statistical report of the work done in this department, we wish to place before you certain points that we have observed in our work at this Hospital and which we feel are worthy of further study and consideration.

Tubercular adenitis.

Marked improvement has been noted after moderate radiation in both cervical and bronchial forms of this condition.

Pneumonia.

The increased usefulness of the Roentgen ray in the early recognition of this disease has been noted.

Subphrenic inflammation.

The importance of fluoroscopic examinations in the diagnosis of this condition has been shown in several cases.

We trust that in the future we may have an opportunity to follow up these observations so that we may be able to present some concrete examples in a future report.

Respectfully submitted,

H. E. RUGGLES, M. D.,
Roentgenologist.

REPORT OF ST. LUKE'S HOSPITAL CLINICAL CLUB

The second year of the St. Luke's Hospital Clinical Club has been distinguished by a considerable growth in membership, and a very marked increase in the enthusiasm of the members. The work has been more and more systematized, as experience has demonstrated the necessity for it. For instance, the members of the Club have undertaken, and to a degree accomplished, the grouping of visceral lesions presenting similar symptoms, with a view to the discussion and adoption of possible methods of differentiation. The presenting of cases to members of the Club, who are working along special lines, has also conduced greatly to accuracy of diagnosis, and consequent desirable results to patients of the members.

Many intelligent patients are beginning to realize these advantages, and are becoming increasingly anxious to avail themselves of the opportunity of this co-operative investigation. During the past year, an average of six cases have been presented and discussed at each meeting. In addition, the Club has enjoyed the findings of Dr. Knapp and Dr. Ruggles in the pathological and X-Ray laboratories. This work has been rendered more useful by the fact that the Club has acquired a projectoscope, which greatly increases the facilities for collective study. The laboratories of the Hospital, through the kindness of the authorities, have been thrown open to the members for more thorough study and investigation; and every facility is extended by Dr. Birch, to whose devoted efforts much of the really gratifying success of the Club is due. The members are unanimous in voicing their appreciation of the courtesies extended them by the Board of Directors of the Hospital during the year.

(Signed) HARRY PARTRIDGE, M. D.
Secretary.

REPORT OF THE FOLLOW UP SYSTEM

Before the December, 1913, letters were sent we requested of the doctors information of the cases. In cases where no information was obtained "Follow-up" letters were sent.

Since the May, 1914, letters, patients have been written to, except in cases of refusals or deaths, whether or not information has been obtained from the doctors.

The result of these letters can be seen in the table below:

	1913			1914

St. LUKE'S HOSPITAL

REPORT OF THE TRAINING SCHOOL

*To the Board of Directors
St. Luke's Hospital.*

GENTLEMEN: I take pleasure in submitting to you the following report of the School of Nursing for the past year.

OCTOBER 1, 1914

Students enrolled	55
Admitted during year.....	30
Disqualified	15

OCTOBER 1, 1915

Students enrolled	70
Graduate nurses	9
Postgraduates	2

As the standard number of nurses necessary for the service of the Hospital has been reached and as the number of applications for admission has greatly increased, it will now be possible to admit students in classes probably three times a year. This has been found the more satisfactory method in the larger Eastern hospitals.

We have been fortunate in having the services of postgraduates in the different departments. Where vacancies in the administration have occurred they have been filled from this source without the usual loss of efficiency.

The staff and student nurses wish again to express their appreciation of the continued co-operation and kindness of the Women's Board.

We also gratefully acknowledge our indebtedness to the staff of lecturers who have given their valuable time to the instruction of the nurses.

(Signed) ESTHER ALLISON BROWN.

REPORT OF POST-GRADUATE CLASS

September 30, 1915.

The Postgraduate Class in Hospital Administration commenced October 1st, 1914. Since that time there have been 116 applications for information and thirteen applications for admission.

Of the thirteen applicants for admission, two decided not to come, as they were offered paying positions elsewhere, ten were admitted and one enters October 1st.

Of the ten pupils admitted, five have graduated, three were allowed to leave after they had been here a short time and two were advised to resign as they were not adapted for the work.

One of the graduates is at present filling the position of Night Superintendent in this Hospital and another one is in charge of the third floor.

The principal work done by the post graduates during their course is assisting in the store and assisting the Night Superintendent and the Dietitian. While assisting the Dietitian, the pupils go to market twice a week, make out the menus and supervise the special diets.

The class work has averaged eighteen hours a month and has consisted of lectures and laboratory work in chemistry, dietetics and bacteriology.

INFORMATION FOR APPLICANTS

Introductory Statement

St. Luke's Hospital, organized in 1871, under the auspices of the Episcopal Church and begun in a small way, is now one of the most beautiful and perfectly equipped on the continent.

In connection with it has been built a home for nurses—fireproof and lacking nothing that might add to its comfort and convenience.

Requirements for Admission

Candidates for admission should be able to meet the following requirements:

1. A complete high school education or a two years' high school course or its equivalent in a recognized school together with two years of special study, or an occupation that would be considered preparatory to the study of nursing.

2. Home training and influences fitted to form good moral character, and lay the foundation for the future work of the nurse.

3. Good physical condition. Candidates are preferred, between 20 and 30 years of age, of strong physique and not under average weight and height.

General Information

The work of nursing demands intelligence, good temper, an orderly habit of mind, thorough trustworthiness, and a willing spirit. No one should enter upon this work except with a strong sense of duty and a readiness to conform to the necessarily strict rules of discipline. The Superintendent of the Hospital and the Superintendent of the Training School decide as to the acceptance of candidates for the preliminary term. A limited number only can be received. The declination, therefore, of a candidate is no reflection on the individual's character. The reasons for declination are not given either to applicants for admission or to probationers on duty.

Candidates should be vaccinated within the year previous to their coming to the Hospital. Their teeth should also be in good condition.

Undergraduate Students.

Candidates if accepted are admitted as vacancies may occur and must serve for a probationary period of six months; if satisfactory at the end of that time they will sign an agreement to remain in the school for three years, and to conform to its rules and regulations. The right is reserved by the Hospital authorities to dismiss a pupil at any time for inefficiency, misconduct, neglect of duty, failure to pass examination, inability to develop qualities fitting the profession she desires to enter, or for any other reason that may seem to them adequate.

Vacation

As the weekly service at the present time is forty-eight hours the vacation may not be more than a week a year.

Sickness

All students are cared for gratuitously when ill and receive the professional services of the physician of the school. Time lost through illness or for any other reason must be made up.

Examinations.

Examinations, written and oral, are held at stated periods, those upon special courses being conducted by the instructors at the close of each course. They are both written and oral, and include practical tests. The standing of the pupil is based upon the general character of work throughout the year as well as the results of examinations.

Graduation

The diploma of the school is awarded to those who have completed satisfactorily the full term of three years, and have passed the final examinations. Nurses are then entitled to examination for registration in this State.

The Course of Instruction

Covers a period of three years, and includes practical demonstration, classes and lectures in the following:

The Theory and Practice of Nursing.

Nursing Ethics	Dietetics	Diseases of the Eye
Anatomy	Materia Medica	Ear, Nose and Throat
Physiology	Medicine	Urinalysis
Hygiene	Surgery	Infectious Diseases
Bacteriology	Obstetrics	

As St. Luke's Hospital is an institution under the auspices of the Episcopal Church, the management requires from the nurses that neither by word nor act shall any nurse assume any position or express any opinion antagonistic to the Church and its teachings. When their duties will permit all nurses are expected to attend the services in the Chapel, unless excused by the Superintendent of Nurses.

Any further information desired may be obtained by applying to the Superintendent of Nurses, St. Luke's Hospital, San Francisco, California.

**OUTLINE OF POSTGRADUATE COURSE FOR NURSES IN
HOSPITAL MANAGEMENT**

This course being a new departure, the details are subject to revision and correction.

Course of Instruction

The selection of the practical work in this course was based on the purpose of providing practice in (1) governing the various departments of hospitals and schools for nursing and (2) teaching student nurses.

The work will, therefore, be about as follows:

Practical Work

Assisting in the supervision of kitchens, nurses' home, and the serving of food.

The arranging of menus and special diets.

The care of food and other hospital supplies.

Assisting the night superintendent.

Assisting in store room.
When off duty postgraduates are allowed to observe the work in the operating rooms, pathological laboratory and the laundry.

Theoretical Work

Physiology—Lectures and recitations.
Chemistry—Inorganic chemistry, household chemistry, physiological chemistry—Lectures and laboratory work.
Dietetics—Lectures and laboratory work.
Bacteriology—Lectures and laboratory work.
Methods of Teaching—Lectures and practice.

Requirement for Admission

This course is open to graduates of registered schools of nursing who are between twenty-five and thirty-five years of age and can furnish evidence of moral, mental and physical efficiency.

The applicant must fill out the enclosed form and send it to the Superintendent of Nurses of St. Luke's Hospital, San Francisco, Cal., together with a letter from the Superintendent of Nurses of the school from which the applicant graduated, also letters from two or more responsible people under whom she has worked since graduation and one from a physician stating the condition of health.

General Information

Applicants must obligate themselves to remain in the Hospital for six months. During this time their board and lodging will be furnished and a limited amount of laundry will be allowed. The only fee connected with the course will be fifteen (\$15.00) dollars to cover laboratory expenses and a deposit of ten (\$10.00) dollars must be made to pay for breakage of chemical appliances; money not required for this purpose will be refunded. No salary is paid.

Students who satisfactorily complete the course will be given a certificate and efforts will be made to assist them in obtaining positions.

**REPORT OF THE NURSES' ALUMNAE ASSOCIATION
OF ST. LUKE'S HOSPITAL**

*To the President and Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: I take pleasure in presenting to you the report of the Alumnae Association of St. Luke's Hospital, for the past year.

Regular meetings have been held the last Thursday evening in each month in the Nurses' Home.

Twenty new members were admitted during the year, making our membership 110.

Our Bazaar held in the Nurses' Home on October 29, 1914, was a great success, from the proceeds of which, and generous donations from many kind friends, we have been able to pay the first installment of one thousand dollars on the bed which we hope to endow, as well as helping in a small way a few of our members who have been ill.

Every nurse who attended the Convention of the American Nurses' Association, must return to her Alumnae full of enthusiasm for her chosen profession. St. Luke's Alumnae lies near our hearts, and plans to increase her usefulness are constantly in our minds.

May we not make this a year in which each member shall do her part as an individual, as a member of a committee, or as an officer to bring new interest into our Alumnae meetings.

NELLIE CLOSE, President.

LIST OF GRADUATES OF THE TRAINING SCHOOL

(Any additional information for this list will be gladly received. Address communications to Miss S. Schrepfer, Secretary of Alumni Association, care of St. Luke's Hospital.)

*Denotes members of the Alumni Association.

FORM OF BEQUEST.

To those who may feel disposed to donate by Will to St. Luke's Hospital, the following is submitted as a form:—

FORM OF BEQUEST OF PERSONAL PROPERTY.

I give and bequeath unto "St. Luke's Hospital," a corporation existing under the laws of the State of California, the sum of Dollars, to be applied to the use of said corporation.

FORM OF DEVISE OF REAL ESTATE.

I give and bequeath unto "St. Luke's Hospital," a corporation existing under the laws of the State of California, for its corporate purposes, all [here insert description of property].

Together with all the appurtenances, tenements, and hereditaments thereunto belonging or in any wise appertaining. To have and to hold the same unto the said corporation, its successors and assigns forever.

Section 1313 of the Civil Code of this State provides that "No estate, real or personal, shall be bequeathed or devised to any charitable or benevolent society or corporation, or to any person or persons in trust for charitable uses, except the same be done by will duly executed at least thirty days before the decease of the testator; and if so made at least thirty days prior to such death, such devise and legacy, and each of them, shall be valid; *provided*, that no such devises or bequests shall collectively exceed one-third of the estate of the testator leaving legal heirs, and in such case a pro rata deduction from such devises or bequests shall be made, so as to reduce the aggregate thereof to one-third of such estate; and all disposition of property made contrary hereto shall be void, and go to the residuary legatee or devisee, next of kin, or heirs according to law."
